-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Mulach et al. (US 4,494,030).

Regarding claim 1 and 9, Mulach et al. disclose a dynamoelectric machine comprising a stator and a rotor, and at least one of the stator and rotor having a core structure comprising: a plurality of magnetic laminations (13) spaced axially along the core (12) structure, a plurality of through holes passing axially through the laminations, an insulated core stud (10 or 26) passing through each of the through holes, the insulated core stud comprising opposing ends, a central shaft portion, and a first layer (30 or 32) of heat shrinkable tubular insulation shrunk fit onto and covering at least a portion of the central shaft portion of the core stud that passes through the laminations, and, nuts (22 or 28) secured to the opposing ends of the insulated core studs whereby the nuts and core studs provide axial tightness of the core structure.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

Art Unit: 2834

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1 and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Hurley et al. (US 6,636,052).

Regarding claim 1 and 9, Hurley et al. disclose a dynamoelectric machine comprising a stator and a rotor, and at least one of the stator and rotor having a core structure comprising: a plurality of magnetic laminations spaced axially along the core (14) structure, a plurality of through holes passing axially through the laminations, an insulated core stud (12) passing through each of the through holes, the insulated core stud comprising opposing ends, a central shaft portion, and a first layer (13) of heat shrinkable tubular insulation shrunk fit onto and covering at least a portion of the central shaft portion of the core stud that passes through the laminations, and, nuts secured to the opposing ends of the insulated core studs whereby the nuts and core studs provide axial tightness of the core structure.

Allowable Subject Matter

5. Claims 2-8 and 10-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
